A FRESH LOOK AT ADVENTURES

PRO-LISTING: RACE TRACK FOR ZX-81

COMPETITION: WIN A QL

WIN £25,000 AND SAVE THE WORLD

Eureka!™

250 K OF PURE MYSTERY BY IAN LIVINGSTONE

■ 5 complete Adventures, each with its own Arcade, in one multi-load mega-program: "Eureka!" is *the* ultimate computer Epic.
■ Epic in scale: "Eureka!" spans five eras of history! You battle against the dinosaurs, outwit Nero and his gladiators, join the Knights of the Rounda Table, escape from Colditz, and finally into 1984 defeat the evil master of the Caribbean who is holding the world to ransom.
■ Epic in sheer size — there's more than 250K for you to get yourself killed in.

Spectrum 48K or Commodore 64 (Turboload)

Full-colour booklet, packed with cryptic clues to help you unravel the mystery — and win the £25,000 reward

Music and sound effects built in

5 PROGRAMS IN ONE

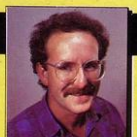
■ All 5 Adventures are linked — but you can choose to play them separately. And they all have REAL TIME built in. So if you don't think fast, you wind up as a pterodactyl's lunch, die of over-exertion in a Roman orgy, or just lose your mind...
■ "Eureka!" is not just an Epic — not just an Adventure. At the start of each historical era, you face an Arcade Action test, to decide your strength level for the Adventure to come.
■ The better your score, the stronger and faster you'll be.
■ And it'll keep you on your toes, with constantly-changing, static and moving graphics. Brilliant music and sound effects add to the excitement.
■ As part of the "Eureka!" pack, you receive a full-colour illustrated booklet, containing cryptic riddles and mysterious illustrations. Using booklet and screen *together*, you steadily unravel the clues and build up a secret phone number piece by piece.
■ If you're first to ring it, you save the world and collect the £25,000!
■ Quite a package! And to give everyone a fair chance, "Eureka!" will be released simultaneously worldwide on October 31st, 1984. No packs will be available until that date. All orders received by mail or phone by 26th OCTOBER will be despatched by post on the 31st right across the world. So order now, and be one of the first off the mark.

High quality, full-colour, static and moving graphics

Just clip the coupon. Or, for even faster action, order by Credit Card on the "Eureka!" Telephone Hotline 01-460 6000.

Eureka!™

THEN THE RACE IS ON!!!



DEVISED BY IAN LIVINGSTONE

The storylines for "Eureka!" are by Ian Livingstone, whose "Fighting Fantasy" books have sold over 2,000,000 copies. He's dreamed up some rather nasty tricks and twists for you in this Epic, because he has also devised the cryptic clues and conundrums in the booklet that goes with the program. He's the one who knows the answers.

"Eureka!" was programmed by Andromeda teams led by Hungarians Donát Kiss and András Császár. It took the equivalent of 5 YEARS to create, and the skills of 4 graphic artists, 2 musicians and a professor of logic too. We told them to stretch the hardware's capabilities, and make sure you were kept awake for hours!! They've done it...

£7 BONUS

When you order "EUREKA!" before 26 OCTOBER 1984, you receive an additional bonus: £7 voucher off the price of the TROJAN LIGHT PEN from PSS MARKETING. Normal price is £17.75. You buy it for just £10.75.

Send your order now to:
"Eureka!", FREEPOST, Dept 400, Mount Farm, Milton Keynes, MK1 1HQ

NO STAMP NEEDED

To: "Eureka!", FREEPOST, Dept 400, Mount Farm, Milton Keynes, MK1 1HQ

DOMARK

Please send me "Eureka!" packs, complete with cassette, full-colour booklet, instructions and rules, at £14.95 each PLUS 55p post & packing. If my order is received before 26 October 1984, I will receive a free £7 voucher towards a Trojan light pen. Please allow 14 days delivery for orders received after 26 October.

SPECTRUM

Spectrum

PROGRAM OF THE MONTH

Instructions for graphics characters are printed in lower-case letters in our listings. They are enclosed by brackets and separated by colons to distinguish them and the brackets and colons should not be entered.

Inverse characters are represented by the letter "i" and graphics characters by "g". Thus an inverse W would be represented by "iw", a graphics W by "gw", and an inverse graphics W by "igw".

Spaces are represented by "sp" and inverse spaces by "isp". Whenever any character is to be used more than once, the number of times it is to be used is shown before it, together with a multiplication sign. Thus "6*isp" means six inverse spaces and "(g4:4*i4:g3)" would be entered as a graphic four, followed by an inverse four repeated four times, followed by a graphics three.

Where whole words are to be written in inverse letters they appear in the listings as lower-case letters. Letters to be entered in graphics mode on the Spectrum are underlined.

Inverse characters may be entered on the ZX-81 by changing to graphics mode and then typing the appropriate characters and on the Spectrum by changing to inverse video and typing the appropriate letters. Graphics characters may be entered on the ZX-81 by changing to graphics mode and then pressing symbol shift while the appropriate characters are entered. On the Spectrum graphics characters may be obtained by changing to graphics mode and then pressing the appropriate character. User-defined graphics will appear as normal letters until the program has been RUN.

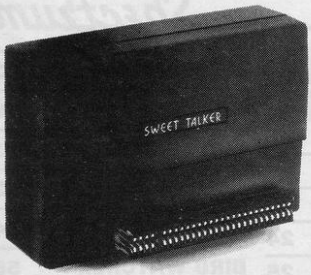
Why wait any longer?

Upgrade your 16K ZX SPECTRUM Now!

The CHEETAH 32K RAMPACK simply plugs into the user port at the rear of your computer and increases the memory instantly to 48K.

- ★ Fully compatible with all SINCLAIR accessories via rear edge connector
- ★ **NO NEED TO OPEN COMPUTER AND INVALIDATE GUARANTEE**
- ★ Why send your computer away and wait weeks for upgrade
- ★ Fully cased tested and guaranteed.

only £39·95
including VAT and P&P.



Now make your Spectrum and ZX-81 Talk

Compatible with Interface I & II

The Cheetah "SWEET TALKER" just plugs into the back of the computer using the existing power supply. Based on an allophone system you can easily program any word sentence or phrase. Fully cased, tested guaranteed and compatible with all SINCLAIR accessories via rear edge connector. Complete with demonstration cassette and full instructions.
No more lonely nights!
Simply incredible at **£29·75**
(Please quote when ordering whether Spectrum or ZX81 owner)

GOLD MAZE

ONE hundredth of the maze is shown in the centre of the screen. The exit is not visible so you must work your way round the maze trying to escape. Gold bars are scattered around the maze and these should be collected to gain points. There is one setback which is that there are also several bars of fool's gold which cannot be distinguished from the real gold bars. If you pick up a bar of fool's gold it will reduce your score by five points. Ten points can be gained for each bar of gold collected.

Gold Maze was written for the 48K Spectrum by 14 year old Tim Smith of Doveridge, Derbyshire who took six hours to write the program.

Lines Function

1- 520: Set-up Maze (SETUP)
530- 700: Prog Control (MAIN)
1000-1060: Get "gold" (GOLD)
1500-1570: Get "Fools Gold" (FOOL)
2000-2050: End game on "exit" (EXIT)
2500-2560: End game on "abort" (ABORT)
3000-3050: Play "win tune" (TUNE1)
Play "lose tune" (TUNE2)

Tim Smith.

5000-5100: Print logo (LOGO)
8000-8240: Print Instructions (INSTRUCT)
9000-9070: Save routine
9500-9510: Load routine

Variables

a$ (50,50): Maze graphics
x,y: Current coords.
a,b: Previous coords.
g: Score
d,p,: duration/pitch (for BEEP)

UDG's

ga: Gold nugget
gb: Fools gold
go: YOU
gd: "WINDOW" SURROUND
ge-gl: "GOLDMAZE"
gm,gn: "EXIT"

Loop counters: a

How it works

The module names suggest in the program summary have been used to describe how the program works. These names have no programming significance.

SETUP (Lines 1-520)

Set up maze in array a$, clear screen, set colours call LOGO, call INSTRUCT. Set score to ZERO. Initialise coords x,y to start at middle of maze.

LOGO (Lines 5000-5100)

Repeat. Play "Rich Man". Print title. Scan keyboard. Until Start Key. Return.

INSTRUCT (Line 8000-8240)

Clear Screen. Print instructions. Clear screen. Clear screen. Print sample maze "window". Clear screen. Print window surrounds and "black out" window.

MAIN (Lines 530-700)

Hold "old" x,y as a,b
x=x+(Key=a)−(Key=q)
y=y+(Key=m)−(Key=n)
IF Key=0 THEN call ABORT. IF a$ (x,y)=wall THEN re-set x,y to "old" values (a,b). Print 5*5 character maze window initially a$ (23-27,24-28) Print go (YOU at window centre). IF a$ (x,y)=gb (gold) THEN CALL GOLD. IF a$ (s,y)=go (fools gold) THEN CALL FOOL. IF a$ (x,y)=gm or gn (exit found) THEN CALL EXIT. Print Score. Jump to MAIN.

GOLD (Lines 1000-1060)

Print "GOLD" message (with BEEPS). Take nugget out of maze set a$(x,y)=" ". Increase score. Erase "GOLD". Return.

FOOL (Lines 1500-1570)

Print "FOOLS GOLD!" (with BEEPS). Take nugget out of maze. Reduce score by 5. Erase "FOOLS GOLD". RETURN.

EXIT (Lines 2000-2050)

Clear Screen. Print exit message/score. Call TUNE1. Repeat. Scan keyboard. IF N pressed THEN stop until Y pressed RUN.

ABORT (Lines 2500-2560)

Clear screen. Print abort message/score. Call TUNE2. Repeat. Scan keyboard. IF N pressed THEN stop until Y pressed RUN.

The main principle

The author has cleverly arranged the program only to allow the player a "peep" at the maze through a 5 by 5 character "window" (showing only 1% of total maze).

The first view is of the section of the maze array a$ (x,y) with x from 23 to 27 and y from 24 to 28. This view (and all subsequent views) is repeatedly printed by the loop around MAIN, until any of the control keys are pressed. Direction keys, in effect, shift the window (not you) by 1 character left/right or up/down for each pass through the MAIN loop.

Before the window can be shifted a check must be made to make sure that you are not in a wall (line 560). If you are, then previous coordinates (for central character of window, which is also where you are) are restored. Otherwise, the shift is made, followed by checks on gold etc.

A NEW, IMPROVED ZX81 KEYBOARD AT THE SAME OLD PRICE. £9.95.

There's only one thing wrong with the ZX81. Its keyboard.

Or rather its lack of one.

Since it's flat your fingers don't feel as if there's any response to the pressure put on the keys.

ZX81 KEYS FILESIXTY KEYS

In other words, you're not quite sure which keys you've pressed until the screen actually tells you.

Our new, improved push button keyboard changes all that.

It matches the ZX81 perfectly. And the keys give a real calculator-type feel.

To set it up all you have to do is peel off the adhesive backing and stick it on top of the ZX81 touchpad.

Because no tampering or soldering is involved the guarantee is not affected. And it will last for up to 3½ million operations.

But our keyboard doesn't just come loaded with features. With it comes a separate overlay and a set of coloured stick-on labels to make game playing easier.

It's yours for the original price of £9.95.

Whichever way you look at it, we think you'll agree that it's a keyboard that's quite outstanding.

Orders to Filesixty Ltd., FREEPOST, London W9 2BR.
Cheques/PO made payable to Filesixty Ltd.
Please send me_____(qty.) Keyboards at £9.95 each (including VAT and P&P).

ALIEN SHOOTOUT

ALIEN SHOOTOUT was not chosen for its originality but for its good graphical content. The game also contains some impressive effects. You are challenged to a duel by an alien on the planet Zyg. The first competitor to score five points wins the duel.

Alien Shootout was written for the 16K ZX-81 by David Ritchie, aged 14, of Stockbridge Village, Liverpool.

BETA BASIC 1.8

ENHANCED BASIC FOR SPECTRUM 48K
FOR GRAPHICS — STRUCTURED PROGRAMMING — DATA HANDLING

Release 1.8 is more powerful than ever! We don't have space to do this program justice — if you can't believe the ad, send us a large S.A.E. for further information.

Features: Commands are single-entry keywords in graphics mode. Syntax is checked on entry. Fully compatible with Spectrum Basic. Microdrive compatible. Comprehensive manual.
NOTE: Release 1.0 is still available for 16/48K Spectrum at £11.00.

ALTER screens colours (general or specific)
AUTO line numbering
BREAK out of code loops
CLOCK digital clock
CURSOR CONTROL CODES allow strings to have complex shapes
DEF KEY user definable keys
DELETE a block of lines
DO-LOOP structure
EDIT at double pace
ELSE used with IF ... THEN
EXIT leave DO-LOOP
FILL enclosed area with specified ink or paper
GET wait for keypress
JOIN two program lines
KEY$ a string
KEYWORDS new keywords on/off
LIST/LLIST line TO line
USED (used with GOTO, GOSUB)
ON ERROR trap errors (with LINE, STAT and ERROR)
PLOT a string (may contain cursor control codes)
POKE$ a string
POP Basic's stack
PROC, DEF PROC, END PROC (for named procedures)
RENUM versatile renumber
ROLL all or part of screen in any direction by specified number of pixels, with or without attributes
SCROLL like ROLL, but without wrap-round
SORT arrays (very fast)
SPLIT program lines
TRACE program execution
UNTIL used with DO or LOOP
WAIT for specific time
WHILE used with DO or LOOP
XOS, YOS move PLOT origin
XRG, YRG change PLOT scale

FUNCTIONS

AND (bit-by-bit)
BIN$ decimal to binary
CHAR$ number to 2 characters
COSE fast cosine
DEC hexadecimal to decimal
DPEEK double PEEK
FILLED filled area
HEX$ decimal to hexadecimal
INSTRING string search
MEM free memory
MEMORY$ all of memory as a string
MOD modulus
NUMBER 2 characters to number
OR (bit-by-bit)
RND# fast RND
SCRN$ recognises user graphics
SINE fast sine
STRING$ repeats strings
TIME$ current time
USING$ formats numbers
XOR (bit-by-bit)

Only £11.00 inclusive! (Upgrade price for Release 1.0 owners is £4.00. This includes a 12-page supplement to your manual. Please quote date of purchase. If you did not purchase from us, state supplier and return original cassette.)

Please send me:
Beta Basic, Release 1.8. Payment of £11.00 is enclosed.
(or £11.50 for foreign orders). Cheques payable to BETASOFT.

I don't believe it! Please send me full details of Beta Basic 1.8. I enclose a stamped addressed envelope.

THE QL MYSTERIES

While the QL's SuperBasic is a very good programming language, QDOS has a number of shortcomings. Fortunately the power of the machine can be simply increased by adding to the QL's command set. We present nine routines, written in SuperBasic, designed to make full use of the QL's undoubted potential.

SPECTRUM TEXT PROCESSOR

A simple, but versatile, program that allows the Spectrum to be used as a straightforward text processor. Full listing given in the October issue.

BASIC BUG HUNTING

Whether you own a Spectrum, BBC micro, Dragon or one of the recently launched computers such as the Amstrad CPC464, in all probability you'll be writing programs in BASIC. It's the way of the world that most programs will not work first time and tracing the inevitable bugs can prove a frustrating and time-consuming process. Our article on bug hunting will help you track down bugs and get your programs up and running in record time.

PLUS all the latest news from the world of microcomputing in addition to the range of regular features.

OCTOBER ISSUE ON SALE NOW — PRICE 95p

Available at all leading newsagents

RACE TRA

RACE TRACK is a simulation of motor racing. Originally a pencil and paper game it has been adapted for the 16K ZX-81 by Jerome K. Laskowski of London SE6.

You play against the computer, which always moves first, and you can choose to play up to five laps. Three basic rules govern the movement of cars and these must be followed to prevent crashing or losing the game.

1. No two cars may occupy the same point at the same time.
2. The point to which you wish to move and the line which connects your current position to your anticipated position must lie within the track borders.
3. The length of your move must be one more than, one less than or the same as the previous move for both horizontal and vertical moves.

The moves should be entered as follows; to move three squares right and one up you would input "31" and to move two squares right and one down you would input "2-1". Invalid moves will be ignored by the computer and should an input mean a possible crash you will be given a warning. If you persist and enter the move you will lose the race and fifty points will be deducted.

If at any time you need advice on the best move to make, input "H".

Your car is the inverse X and the computer drives the inverse 0. Points are awarded once both cars cross the finish line, and are based on the winning margin. If your score exceeds the world record, set at fifty points, you can change it at line 2 of the program. Alter the 1 in line 3390 to give more crash warnings if necessary.

ZX-81 OWNERS

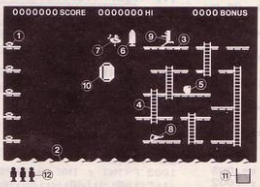
AT LAST THE PROGRAM YOU'VE BEEN WAITING FOR!

Rocket Man

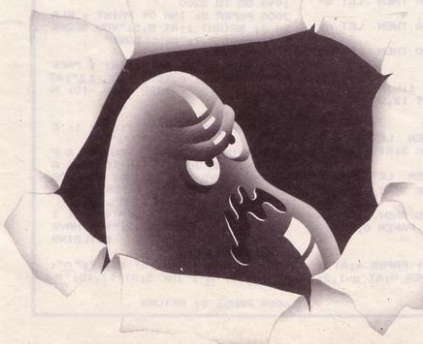
Coming Soon! SPECTRUM VERSION

with Hi-Res Graphics on standard ZX-81 16K

Actual ZX-81 Screen Display!



1. Diamonds
2. Sea
3. Platforms
4. Ladders
5. Fuel Cans
6. Rocket
7. Vulture
8. Leg of Lamb
9. Player
10. Bubloid
11. Fuel Gauge
12. Men Remaining



Get rich quick by collecting Diamonds that are simply lying there waiting for you!

Oh . . . I forgot to mention that there are one or two problems! There is an expanse of Shark infested water between you and the Diamonds and a strange breed of Bubble that seems hell bent on getting you in it! Somehow you must cross it. . . .

You have a Rocket Pac to help you (a Vulture on higher levels) but you must rush around the platforms and ladders collecting cans of fuel (legs of lamb with the Vulture) and cursing that weird Bubble. Once you have enough fuel then it's Chocks Away!

Oh . . . but don't run out of fuel on the way – otherwise it's . . . . SPLASH!

The aim is to collect all the diamonds from the far left hand side of the screen, whilst avoiding the rampant Bubloid. These emerge from the sea and are hell-bent on returning to their watery habitat with you in tow. Sooner or later you are going to end up in the drink – The idea is to make it later!

By belting round the system of platforms and ladders, cleverly avoiding the Bubloid, you collect the fuel cans which appear in random positions, until you consider that your fuel gauge indicates sufficient in the tank. Now you can go and collect your rocket. With the rocket-pack strapped to your back you can fly across the expanse of sea to collect the diamonds . . . but don't run out of fuel or your rocket-pack will simply disappear and you will wind up in the drink!

There are six stages with six different platform layouts. On stages 1-3 the Bubloid, which floats in front of the platforms with uncanny ease, gets an ever increasing ability to home in on your position, making the task of staying alive more demanding with each stage. On stages 4-6 you once again start with the easiest Bubloid (which is a blessed relief!) but the fuel cans are replaced by legs of lamb which you must collect to feed your vulture, and once it has enough energy (or you think it has!) you must flap across the water on its back to collect the diamonds.

Extra men are awarded for every 10,000 points – but ONLY once you have collected all the diamonds and so completed each particular stage.

GOOD LUCK!

Available from all good computer shops or send cheque/P.O. for £5.95 (inc P&P) to:

FIRE CHIEF

SAVE the children from the fire before the flames become too fierce. The children will appear at the windows of the tower and you must race up and down the fire engine ladder to reach them. Once you have lost your three lives the building will crumble.

Fire Chief was written for the 16K Spectrum by Peter Glancy, aged 15, of Liberton, Edinburgh.

WIN A QL!

FIRST PRIZE: A QL COMPUTER

SECOND PRIZE: FIVE SECOND PRIZE WINNERS WILL WIN A DK'TRONICS LIGHT PEN AND KEYBOARD

THIRD PRIZE: TWO THIRD PRIZE WINNERS WILL WIN A RAM QUICKSHOT JOYSTICK AND TURBO INTERFACE

RUNNERS-UP: One hundred runners-up will win a Spectrum game from one of ten top companies. Software from MICROMEGA, ULTIMATE, QUICKSILVA, AUTOMATA, BUG-BYTE, C.C.S., DURELL, P.S.S., NEW GENERATION and ARCADE can be won. Now is your opportunity to win 'Deathchase', 'Codename Mat' and 'Full Throttle' from MICROMEGA, 'Sabre Wulf' from ULTIMATE and best-selling games from any one of the companies listed.

● The **Sinclair QL** computer needs little introduction. The most powerful Sinclair computer yet, it uses the new language Superbasic and has 128K Ram. It comes complete with four major software packages, and is already supported by two magazines and several books. It is the machine that everybody is talking about this year; see how to win one below.

● The **dk'tronics light pen** allows you to produce high-resolution pictures, using sixteen pre-defined instructions. Change paper, border, ink or colour. Draw circles or boxes, fill them in with colour, draw freehand, animate your characters and do much, much more. Meanwhile, the keyboard which third prize winners will also be sent will allow them to use their Spectrum more quickly and efficiently.

● The **Ram Quickshot Joystick** combines all the features you could want in a joystick. Four suction cups hold it to your table, allowing you to play games with one hand only. Two fire buttons allow you to fire either with thumb or forefinger. What is more, with the addition of the **Ram Turbo Interface,** you can plug two joysticks into your Spectrum at once, for a multi-player game. The Turbo Interface also provides a variety of interfaces, allowing you to connect cartridge software or Microdrive to your Spectrum.

HOW TO ENTER

Listed below are six major features of the QL computer. Which of these are most essential in a new computer? Use your skill and judgement to arrange the six points in order of importance. For example, if you feel that a new keyboard is the most essential feature of any new computer, you could write C by number one on your entry form.

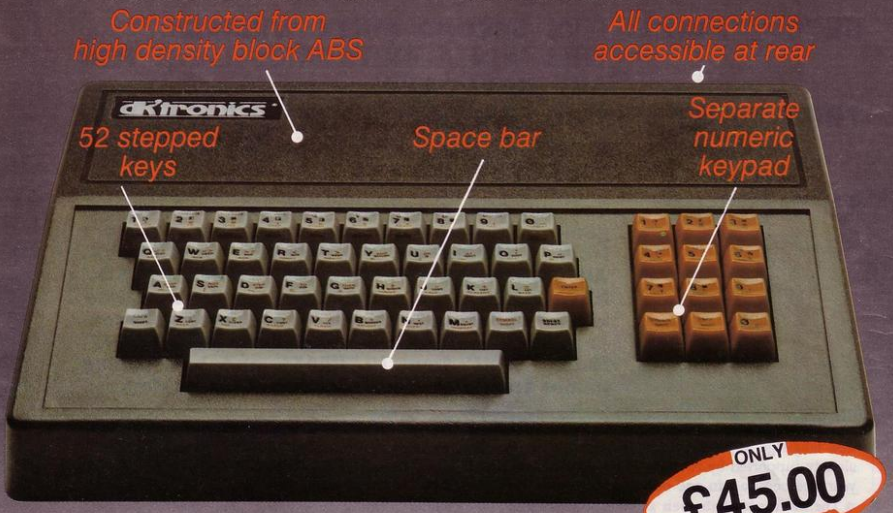
A Large amount of memory
B 32 bit processor
C Professional keyboard
D Advanced language
E Built in program storage
F Excellent software

When you have arranged the six points in order of importance, complete the tie-breaking sentence: "I would like to win a Sinclair QL because . . .".

All entries must be submitted on the cardboard entry form inserted in the magazine. They should arrive at "Sinclair Programs" not later than first post October 31st. Employees of EMAP Computer and Business Publications are not eligible to enter. The editor's decision on all matters relating to the competition will be final.

THE FINAL TOUCH

We've just added the final touch to our professional keyboard.
This new Microdrive compatible keyboard offers more key functions than any other in its price range. And the stepped keys and space bar make it even easier to use. Our keyboard, constructed from high density black ABS, will take your Spectrum into the professional league.
It has 52 "stepped" keys plus space bar. A separate numeric key pad consisting of 12 red keys including a single entry 'delete' plus single entry 'decimal point', facilitate fast numeric data entry.
The 15" x 9" x 3" case will accommodate your Spectrum and other addons like interface 1, power supply etc. and forms an attractive self-contained unit.
All connections, power, Mic, Ear, T.V., network RS232 and expansion port are accessible at the rear.
A few minutes, a screwdriver and the simple instructions supplied are all you need to fit your Spectrum.
All dk'tronics products are covered by a comprehensive guarantee.



ONLY £45.00

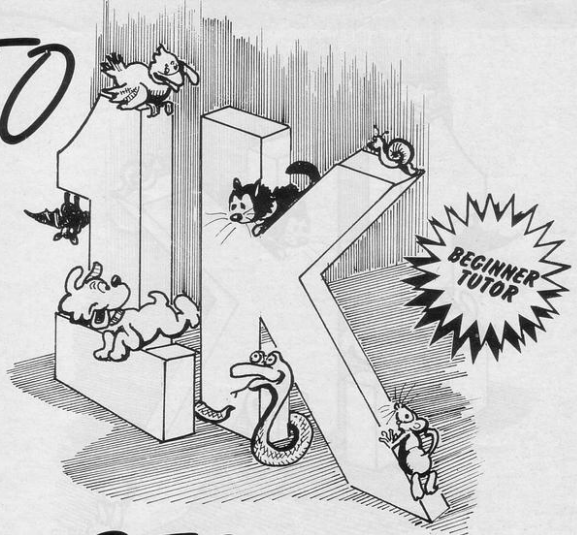
The Spectrum Connection

3 INTO GOES—



THREE INTO 1K GOES is a good example of memory conservation, written for the ZX-81 by M. J. Davies of Llandeilo, Dyfed. The program enables the user to fit three games into 1K of memory so tightly that the mere addition of one character will prevent you from playing Mini-Hurkle.

When the program is run the screen goes blank until you press 1, 2, or 3. **Guess the number** covers figures from 1 to 200. If your number is too high 1 is displayed, too low and −1 is displayed and if correct the number of goes taken is shown. When **Reaction Tester** is played, wait for the screen to turn white and press newline. Your score is then shown in seconds. The last game is **Mini-Hurkle.** Enter the X and Y co-ordinates and the computer will tell you the direction in which the hurkle lies. An "H" is displayed when the hurkle is found.

THIS IS a very compact "3 in 1" program which has been very cleverly designed to fit into 1 K. As such, it is as much a lesson in memory conservation, as in programming.

SUBROUTINES AND MAIN CODE

2-7:	Set up variables and program control (PROG)
8-9:	Random number subroutine (RAND)
20-32:	"Guess the number" Game 1 (GAME1)
40-53:	"Reaction Tester" Game 2 (GAME2)
60-82:	"Mini-Hurkle" Game 3 (GAME3)

VARIABLES

Most of the variables have different uses to save memory. A list of the names will suffice here, as their uses will become apparent in "How it works".

Strings: A$

Numeric variables: N, C, V, R, X, Y, A, B

HOW IT WORKS

The "module" names suggested in the program summary are used for the purpose of describing how the program works. These names have no programming significance.

Prog (Lines 2-7)
Set N=8, C=−1
Select SLOW mode
Clear Screen
IF KEY>0 AND key<4 THEN jump to GAME (Key)
Jump to PROG

Rand (Lines 8-9)
R=INT (RND*V) i.e. any whole number between 0 and V−1
Return

Game1 (Lines 20-32)
Set V=200
CALL RAND
V=R+1 (i.e. 1-200)
Set R=0
Loop
PRINT "?"
INPUT B (Player's guess)
Clear Screen
Print −1 (low), 0 (true)
1 (high)
R=R+1 (no. of goes)
IF B not equal to V
THEN jump to LOOP
Print R
Jump to PROG

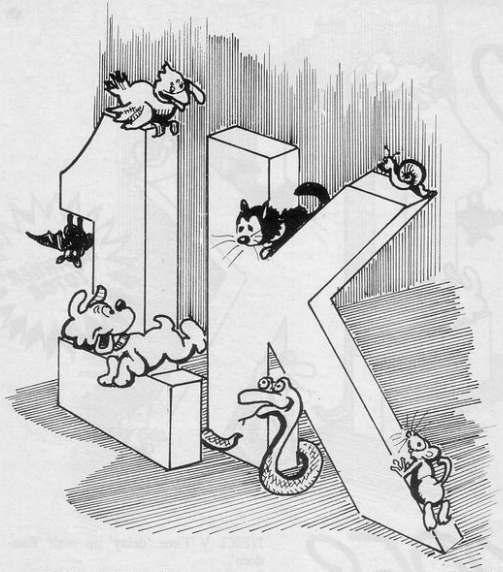
Game2 (Lines 40-53)
Sert FAST mode
Input A$ (waits for player to press any key to start)
Set V=2401
Call RAND (R=0 to 2400)
FOR V=1 to R Random time
NEXT V Time 'delay' up with 'Random'.
Set R=16436 (Systems variable for frame counter)
Poke R, R+C with 255
(i.e. set all 16 bits)
Input A$ (waits for Player to react to end of black screen)
Print ((255-PEEK 16436)+256* (255-PEEK 16437) /50
(i.e. no. of frames sent to screen from start of count /50 frames per sec)
Jump to PROG

Game3 (Lines 60-62)
Set A=0, V=4
Call RAND
Q=R (Hurkle X coord)
Call RAND (R=Hurkle y coord)
FOR A=4 TO STEP −1
Print A, "+++++"
NEXT A
Print "01234" (Grid references)
Input X,Y (Player's guess)
Black out square at 4−Y, X+1
Set A$="" (null string)
IF Y<R THEN A$="N" (North)
IF Y>R THEN A$="S" (South)
IF X<Q THEN A$=A$+"E" (East)
IF X>Q THEN A$=A$+"W" (West)
Print A$
IF Wrong guess
THEN jump to Input X,Y
Clear Screen
Jump to PROG

General Notes

From the memory conservation point of view, there are several devices used here.

1) -COS PI and SIN PI for 1,0. These are good alternatives to the use of

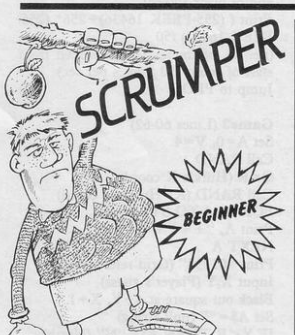


```
  3 LET N=VAL "8"
  3 LET C=-COS PI
  4 SLOW
  5 CLS
  6 IF INKEY$)"0" AND INKEY$("4
" THEN GOTO VAL INKEY$+CODE "="
  7 RUN
  8 LET R=INT (RND*U)
  9 RETURN
 20 LET U=CODE "COS "
 21 GOSUB N
 22 LET V=R+C
 23 LET R=SIN PI
 24 PRINT "?"
 25 INPUT B
 26 CLS
 27 PRINT B;" "; (B)V)-(B(V)
 28 LET R=R+C
 29 IF B(V THEN GOTO CODE "/"
 30 PRINT R
 31 INPUT A$
 32 RUN
 40 FAST
 41 INPUT A$
 42 LET U=VAL "7**4"
 43 GOSUB N
 44 FOR V=C TO R
 45 NEXT V
 46 LET U=PEEK INT PI
 47 LET R=VAL "16436"
 48 POKE R,U
 49 POKE R+C,V
 50 INPUT A$
 51 PRINT ((V-PEEK R)+(U+C)*(V-
PEEK (R+C)))/CODE "M"
 52 INPUT A$
 53 RUN
 60 LET A=SIN PI
 61 LET U=VAL "4"
 62 GOSUB N
 63 LET Q=R
 64 GOSUB N
 65 FOR A=U TO A STEP -C
 66 PRINT A;"+++++"
 67 NEXT A
 68 PRINT " @1234"
 69 INPUT X
 70 INPUT Y
 71 LET A$=""
 72 PRINT AT U-Y,X+C;"■"
 73 IF Y(R THEN LET A$="N"
 74 IF Y)R THEN LET A$="S"
 75 IF X(Q THEN LET A$=A$+"E"
 76 IF X)Q THEN LET A$=A$+"U"
 77 PRINT AT R,CODE A$;A$;""
 78 IF X(>Q OR Y(>R THEN GOTO V
AL "69"
 79 CLS
 80 PRINT "H"
 81 INPUT A$
 82 RUN
```

PI/PI and PI/PI with an extra byte saved when representing zero.

2) Good use is made of the numbers already held in ROM for CODES (0-255). e.g. CODE "COS" gives a saving of 2 bytes on VAL "200".

3) If the number is too large to use (2) above, then see if an operator can be used e.g. VAL"7**4" uses 1 byte less than VAL"2401".



BOUNCE on the trampoline at the bottom of the screen and catapult yourself into the apples. If you miss the trampoline on your descent the game will end. The birds that are dotted about the screen should be avoided as any contact will result in the loss of a life.

Scrumper was written for the 16K Spectrum by Roy Farrington, aged 13, of Bolton, Greater Manchester.

WEATHER PREDICTOR

AFTER entering the day's weather, a forecast for the next day will be given. The computer will prompt you to enter the relevant information; including the wind speed and humidity. The author claims that forecasts given are as reliable as those given on the television.

Weather Predictor was written for the 1K ZX-81 by Wayne Phipps of Narborough, Leicester.

```
  1 LET SN=7
  2 LET SU=0
  3 LET RA=5
  4 LET DU=2

COCONUTS

COLLECT the coconuts from the tree at the end of your garden by jumping over the gaps in the ground. Each time you move a new gap appears. The river runs below your garden so if you misjudge a gap you will fall into it. The keys to use are 5 and 0.

Coconuts was written for the 16K ZX-81 by Neil Yates, aged 13, of Thame, Oxon.

BANNER

BANNER is a character enlarger written for the 1K ZX-81 with printer attached by David Blackburn of Smallfield, Surrey.

It produces a banner from the string in line 20 and this is copied directly to the printer. The contents of this string may be changed to suit your requirements. Each character is enlarged 1024 times, which can be altered by changing the number of characters/asterisks added to B$ in lines 70 and 80 and the corresponding number of LPRINTs in line 91. Leave out the semi-colons to make the display smaller.

```

```

PUZZLE SOLVER

PUZZLE SOLVER is a useful program to help find the solutions to puzzles in which you have to pick out words from amongst a group of letters in a grid. Input the measurements of the grid, any size up to a maximum of thirty letters across and twenty characters down, and then enter the letters on each row. The information is shown in the grid and you can then enter a word for the computer to find. The computer scans the grid and if a word cannot be found, asks you to try again.

Written for the 48K Spectrum by Christopher Miles, aged 12, of Egham, Surrey.

Bird Drop

DROP as many eggs as you can onto the flowers below before the bird lands. Ten points are given when a flower is hit but if you miss and waste an egg five points will be deducted. To release an egg use key "d".

Bird Drop was written for the 16K Spectrum by David Yates of Higher Irlam, Manchester.

JUNGLE TROUBLE

ESCAPE from the jungle before you are captured by the animals. As you reach the edge of the jungle you will move into denser growth and be confronted by more animals. Do not move too fast as you may find that the animals suddenly appear in front of you. Use the cursor keys in your bid to escape.

Jungle Trouble was written for the 16K Spectrum by Andrew Toumazou, London W3.

No monsters no rubbish

AFTER I HAD bought the July edition of **Sinclair Programs** I tried the infinite lives POKE for **Jet Set Willy**, which works well. I have since found some POKEs which remove the monsters.

```
10 CLEAR 25000: LOAD "" CODE
20 FOR a=43780 TO 45823: POKE a,0: NEXT a
30 FOR a=46080 TO 49151: POKE a,0: NEXT a
40 POKE 35899,0
50 BORDER 1
60 RANDOMIZE USR 33792
RUN.
```

Do not LOAD the first part of the program.

I also own Wheelie, on which I have reached the eighth level. The codes for the earlier levels are: second WITTY, third SHARK, fourth BEBOP, fifth XENON, sixth ZX83B, seventh 2MQL3 and eighth HRME2.

N J Aves, aged 12,
Fleet, Hampshire.

ZX penfriend

I AM writing to you from the north of Italy. I have recently read some of the latest editions of *Sinclair Programs* and I must congratulate you on the good software which you publish.

I am also writing for another reason. I should like owners of 16K and 48K Spectrums to correspond with me so that we can exchange programs, news and information about the Spectrum. Here in Italy new software arrives very late, and there is not the variety which there is in the United Kingdom.

I would particularly like to hear from English user groups, as I believe they have lots of programs and information.

Help me to become a good Spectrum owner, and gain yourself an Italian friend by writing to me at the address below.

Maurizio Verdi,
Via Scanini 90/31,
20153 Milan,
Italy.

Competition

I AM writing to tell you how much I enjoy your magazine and all the programs in it. I think that most readers will agree, however, that one fault in it is that there is no competition. This would be a bonus, and would be worth every penny that I pay for the magazine — even though it is worth every penny as it is.

David Oliver,
Selkirk, Scotland.

ZX plea

WHEN WILL somebody produce something to help ZX-81 owners to solve their loading problems? What we want is to be able to load first time every time, and not have to sit there like ZX twits for five minutes, only to find that the program has crashed and our blood pressure is up again. Come on somebody, help us, we need it.

John Giles,
Ilford, Essex.

Pen friend

MY PARENTS recently bought me a 48K Spectrum which I am using successfully. I should like to know whether anyone between the ages of 14 and 16 would like to become my penfriend. We could exchange programs and I would be able to learn more about my computer. If anyone is interested, please write to me at the address below.

Karen Webster,
15 Melchet Road,
Harefield,
Southampton.

Ant raid

I HAVE beaten Stephen Tunstall's high score on the program Ant Raid. I managed to kill 82 ants. I think the game is great.

Thank you for a brilliant magazine.

Michael Pearce,
Honiton, Devon.

Forty niner

RECENTLY I bought a game called **Forty Niner.** After playing around ten games I got the hang of it and scored 51,935, which has given me aching fingers.

Can anybody give me details on high resolution graphics, as I was amazed by the picture of the cosmic cockerel, and by the writing?

N. Knight,
Sheffield.

Protection

I AM writing in connection with the **Password** program listed in the March edition of *Sinclair Programs.* I discovered that it is not an ideal program for protecting programs against pirates. You cannot change the code as you can in my program, and it is also longer than my program. A short, simple protection program is:

```
1 PRINT AT 9,7; "PLEASE ENTER PERSONAL CODE": INPUT g$
2 IF g$="PC246" THEN GOTO ? :CLS
3 IF g$ <> "PC246" THEN GOTO 1
```

You can change the code as many times as you like by changing the characters within the inverted commas on lines two and three. In line two the question mark should be replaced by the number of the first line of the main body of the program.

Richard Whitehurst,
Lichfield, Staffs.

Match met

WITH REFERENCE to Jason Goodwin's letter, "Meet your Match", in the July 1984 edition of *Sinclair Programs.* It is possible to beat the computer. I — a non-expert with computers — can beat it nine times out of ten. My son, Andrew, and I tried it after reading Jason's letter and I won again.

Ann Johnson,
Hockley, Essex.

High score

I HAVE JUST been reading the July issue of *Sinclair Programs* and have noticed that Duncan Cayless had achieved a score of 109 on **Alphabet Timer.** I have beaten his first record by 41 units, as I scored 68. I can normally achieve a score of less than 110. Please let me know if anyone has beaten this score.

Paul Brown,
Brighton, Sussex.

Please complete this form and enclose it with any program which you send to us for possible publication.

To: Sinclair Programs, 67 Clerkenwell Road, London EC1R 5BH

I enclose ..... Program(s) for the.....computer.

I guarantee that each program submitted is my own original work.

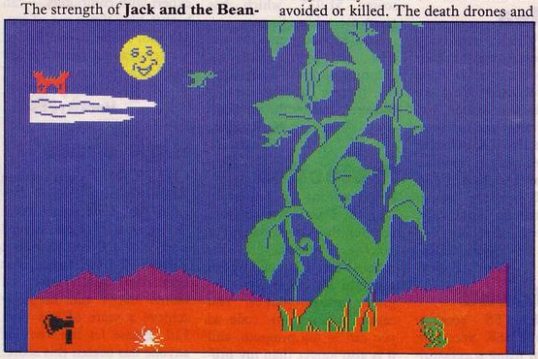
Youth's high-rise crime

We look at the latest Spectrum releases to discover just what Jack was doing up that beanstalk.

WE ALL know the story of Jack, the boy whose magic beans grow into a beanstalk up which he climbs to steal the giant's treasure at the top. Thor have turned this story into a very impressive computer game.

Playing the part of Jack you must climb the beanstalk, move around the giant's house, and take the treasure. There are, of course, problems. Strange creatures bounce around the screen, killing you if they touch you, and it is all too easy to fall to your death either by tumbling off an object or leaping carelessly off the screen.

The strength of **Jack and the Beanstalk** lies in its graphics. Each screen consists of a well-designed and detailed picture which remains static while a small amount of creatures move across this background. This is an excellent technique, and one of which we will doubtless see a lot more during the months to come.



Having overcome surprise at the graphics Jack and the Beanstalk proves to be a very enjoyable game. The instructions do not make it clear that one object must be collected from each screen before that screen can be left, and it is not immediately apparent why Jack should take the axe *before* climbing the beanstalk. Routes are also not obvious, but must be deduced by trial and error, which is frustrating and unnecessary. Most annoying of all is the long pause after a life is lost while the same little tune is played again, and again.

It is disappointing that a game on which such attention has obviously been lavished should fall down on minor details. Nonetheless, Jack and the Beanstalk has an originality which is rare in the software market at the moment.

Jack and the Beanstalk costs £5.95 and is produced by Thor Ltd, Erskine Industrial Estate, Liverpool, Merseyside.

The Prize

THE PRIZE is a phenomenally complicated maze game. The player's first task is to collect five code pods in numerical order. There are forty nine locations in this section of the maze, and each is populated by deadly monsters which must be avoided or killed. The death drones and mutants shoot at you, while the crushers block your way, squashing you to pieces.

There are only two points in your favour. Firstly, it is possible to find extra lives hidden in the maze. Secondly, somewhere in the maze is an energy base which provides immunity from enemies for a limited period of time.

Once you have mapped this level, avoided the drones, mutants and crushers, and collected the pods in order you find yourself transported to the next section of the maze, where you must repeat the process.

Prize money will be awarded to the first person to send a copy of the code screen on level four to Arcade.

The Prize is produced by Arcade Software Technology House, 32 Chislehurst Road, Orpington, Kent and costs £5.50.

Borzak

BORZAK from Betelgeuse reporting. Am now making my way back to my spaceship over rough terrain and marsh. Leap the crater, and the next, switch on the anti-gravity device, float along . . . there, end of level one.

"Starting level two now. Aaaargh, a giant frog. Speed up, leap, and over. Now another one, speed up, leap and . . . it moved, unfair. Back to the beginning, defeated by the frogs again.

"Sneaky level selection allows me to skip to level three. Over the hurdle, over the crater, anti-gravity over the next three hurdles. Splat, into the next crater.

"Switch to level four. A dragonfly! Duck, then leap the snake. Under, over, under, over. Phew. Now, over the stepping stones, over the leaping fish and under the spiders. Only level five to complete now."

Guiding Borzak through all five levels, back to his ship will be a challenge for all but the most experienced arcade enthusiasts. The keys are simple to use, but knowing when and where to jump, duck or speed up is a skill which needs weeks to perfect.

Borzak is produced for the Spectrum by Channel 8 Software, 51 Fishergate, Preston, Lancashire and costs £6.95.

Tornado low level

JUST WHEN you thought it was possible to use your computer to do something other than fly around and bomb things **Tornado Low Level** screamed up to the top of the charts, and we are all back where we started.

Not quite back, of course. The graphics of the game are extremely good. Your plane flies over trees, houses, pylons and sea at different heights. Your height is apparent due to the

distance your plane is from your shadow. This is a very good way of depicting three-dimensional scenes on screen, and has also been used by Psion in **Match Point.**

The game is also very difficult, for swooping low over your target at exactly the right point is not as easy as it appears at first sight. Hitting all targets before you run out of time or fuel is virtually impossible without hours of practice.

There is a tendency these days for manufacturers to rely heavily upon excellent graphics, which will make a game attractive in the shops, and to skimp upon other aspects of the game. Tornado has a very eye-catching screen display, but its plot shows little originality.

Tornado Low Level is produced for the 48K Spectrum by Vortex Software, 280 Brooklands Road, Manchester and costs £5.95.

Automania

THE SCREEN shows lots of levels, connected by ladders with obstacles to trip over, and holes to fall through. You control a character who moves around the screen, collecting objects to assemble on the other screen. No, wait; this time the character you move is an endearing cartoon of a garage mechanic. No, of course you haven't seen it before. You have to assemble a car, you see, and the program plays a Laurel and Hardy theme and . . . why are you looking so bored?

For those of you who have not seen variants on this game a thousand times before **Automania** is produced by Mikrogen, 44 The Broadway, Bracknell, Berkshire and costs £6.95.

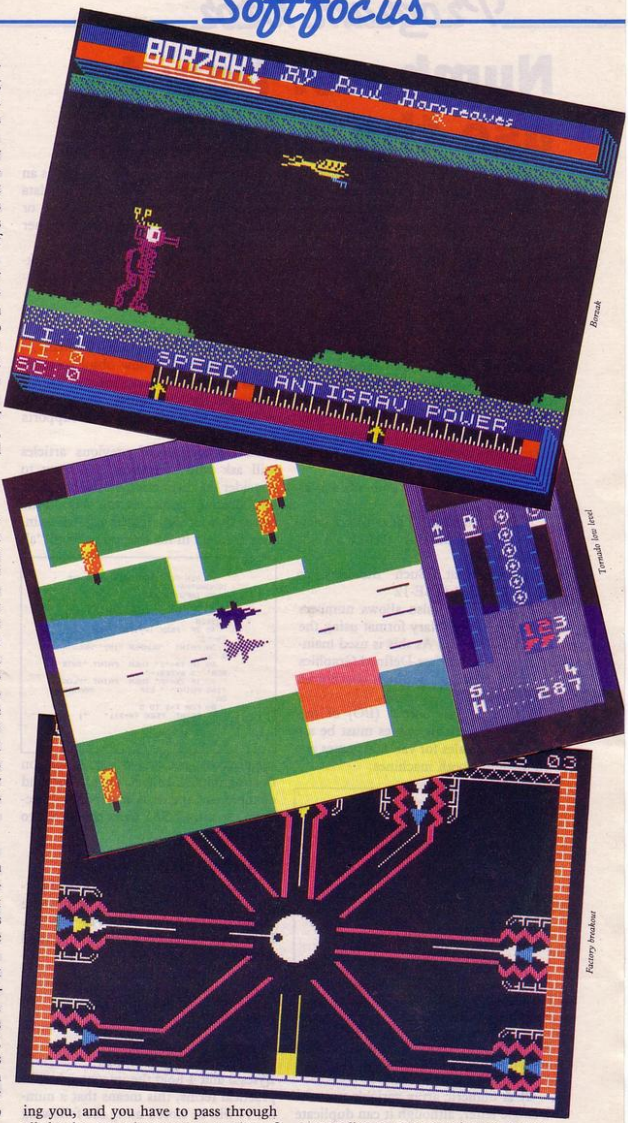
Factory breakout

THE ROBOT factory has been taken by aliens which have activated the factory's self-destruct mechanism. The only robot left is Zirky, and you must help him to evade the monsters and escape.

The plot is thin, but this does not stop **Factory Breakout** being an enjoyable, if rather straightforward game. There are three playscreens. Each has an elaborate description but, basically, the idea of the first is to shoot the lines which grow around you. If you can prevent the lines from reaching you for a set period you move on to screen two which involves crossing the screen without hitting any one of three barriers.

On the first level it is screen three which proves a problem. Your movement is restricted, there are aliens chasing you, and you have to pass through all the doors on the screen a number of times in order to finally obliterate them.

The three screens become rather repetitive after a while, and the game does not have any features which make it outstanding among arcade-type games. Factory Breakout is produced for the 48K Spectrum by Poppysoft, The Close, Common Road, Headley, Newbury, Berkshire and costs £5.50.



Numbers: how to use them in Basic

TO BE ABLE to program your machine effectively and efficiently, it is important to know a little about numbers and number-crunching.

There are two aspects of numbers to consider:

1) How you see them.

2) How the computer sees them.

How you see numbers depends on the format you use for entering numeric data using INPUT, LET and READ commands. The same kind of format is used by the computer to present you with results using PRINT and LPRINT commands. There are only three types which are of immediate interest.

1) Integers. Whole numbers such as −1, 0 and 25

2) Real Numbers. Those with a decimal fraction such as 10.625, -1.33, 3.142 and ½

3) E Format. Such numbers as 0.32E10 and -1.683E-12

The Spectrum also allows numbers to be input in BINary format using the POKE command. As this is used mainly for setting up User Defined Graphics the BINary format need not concern us here.

For input and output (I/O) of numeric data, variable names must be assigned. The rules for variable names are the same for both machines:

```
300 REM FLOATING POINT CONVERSI
ON
310 INPUT X
315 LET N=0
320 LET S= SGN X
330 LET X= ABS X
340 IF X >= 2^32 THEN  GO TO 40
0
350 LET X=X*2
360 LET N=N+1
370 IF X<2^31 THEN  GO TO 350

380 GO TO 500
400 LET X=X/2
410 LET N=N-1
420 IF X >= 2^32 THEN  GO TO 40
0
500 LET A= INT (X/2^13)
502 PRINT 2^32; PRINT X
504 LET X=X-2^13*A
508 LET B= INT (X/2^12)
510 LET X=X-2^12*B
520 LET C= INT (X/256)
530 LET D=X-256*C
540 PRINT "EXPONENT=";160-N
550 PRINT "MANTISSA=";A-128+B*
11;" ";B;" ";C;" ";D
560 GO TO 300
```

1) Simple numeric variables (containing one data item) can be any combination of letters and numbers, provided that the first is a letter.

2) A numeric array variable must be a single letter, although it can duplicate a letter which has been used for a simple variable.

Number representation

The Z80 microprocessor at the heart of both the Spectrum and ZX81 uses an 8 bit/byte pattern. Therefore all data representations, be they numbers or characters, are held in bytes, either singly or in combination.

There are three ways in which computers normally represent and handle numbers:

1) Integer

2) Floating Point

3) BCD (Binary Coded Decimal)

BCD arithmetic is now obsolescent as far as most micro Basics are concerned, although the assembler programmer will know that the Z80 still supports this representation.

Astute readers of previous articles will ask why it is even necessary to consider the distinction between integer and floating point, as the May issue stated that for both machines, "all numbers are held in floating point" and "all calculations performed are done on floating point". In fact, only the second of these statements is true of the Spectrum. So only ZX81 users can afford to skip the next section.

```
10 REM FLOATING POINT/INTEGER
DEMONSTRATION
20 INPUT N
30 LET T$="F"
40 LET V= PEEK 23627+256* PEEK
23628
45 IF  PEEK (V+1)=0 THEN  LET
T$="I"
50 PRINT '"NUMBER ";N;" HELD A
S ";
60 IF T$="I" THEN  PRINT "INTE
GER""5 BYTES:-"
70 IF T$="F" THEN  PRINT "FLOA
TING POINT"'" EXP          MANTIS
SA"
80 FOR X=1 TO 5
90 PRINT  PEEK (V+X);"   ";
100 NEXT X
110 GO TO 20
```

Integer Data

An integer is interpreted by the Spectrum BASIC interpreter as any whole number in the range -65535 to +65535. Five bytes of memory are used to hold an integer, as follows:

Byte 1 = 0 (unused)
Byte 2 = 0 for positive integer
= 255 negative integer
Byte 3 = low byte
Byte 4 = high byte
Byte 5 = 0 (unused)

Bytes 3 and 4 hold the integer value. In practical terms, this means that a number N will be stored using the following formulae:

For a positive integer:
Byte 3 = N - 256*INT (N/256)
Byte 4 = INT (N/256) (high order)

For a Negative Integer:
Byte 3 = 65536 - N - 256*
INT ((65536-N)/256)
Byte 4 = INT ((65536-N)/256 (high order)

Although two of the five bytes are unused in this representation, it does enable the user or the computer to change the contents to floating point at any stage.

Floating point data

Any integer outside the range specified for the Spectrum, or any real or E format number specified for either machine will be held in floating point.

The system breaks the number down into two parts, exponent and mantissa, with the decimal point "floated" to maximize significance. In decimal, the process is easily understood. For example:

$0.005679 = 0.5679*10^{-2}$
$= 0.5679*E-2$

Thus, we have:
mantissa = 0.5679
exponent = -2

Binary floating point numbers are not so easily understood, although the principle is the same. The process is best demonstrated with the aid of Program 1 (suitable for both machines). Again, five bytes are allocated to each floating point number. The program will calculate the exponent (byte one) and mantissa (byte two) given the number x. In effect, we are putting a "binary decimal point" immediately to the left of the first significant binary digit as in decimal. In binary, with four bytes to fill for maximum accuracy, we "expand' or "contract" the mantissa, simultaneously "taking up the slack" on the exponent, by repeatedly multiplying or dividing by two.

As this is quite a difficult program to understand, I will use the reverse technique I recommended in my last article, i.e. program in words.

Setup (lines 300-340)

Input X (real number)
n=0 (number of multiplications/divisions by 2)
s=Sign of x
x=absolute value of x
If x>=2↑32 (overflow on 32 bits) THEN jump to DIVIDE
Continue with MULTIPLY

Multiply (lines 350-370)

x = 2*x } Double number
n = n+1 } and increment
If X<2↑31 (first bit of four bytes not yet set)
THEN jump to MULTIPLY
Jump to BYTE

Divide (lines 400-430)

x = x/2 }
n = n-1 } Divide number by 2 and decrement n
IF X >=2↑32 (overflow on 32 bits) THEN jump to DIVIDE

Byte (lines 500-530)

A = INT (x/256↑3) Byte 1
x = x-A*256↑3 Remainder
B = INT (x/256↑2) Byte 2
x = x-B*256↑2 Remainder
C = INT (x/256) Byte 3
D = x-256*C Byte 4
Continue with EXPONENT

Exponent (line 540)

Print EXPONENT = 160 - n

Mantissa (line 550)

Print MANTISSA = A - 128 (if s = +ve i.e. x = positive), B,C,D
Jump to SETUP for next x

You are probably still puzzled by the adjustments to the exponent and mantissa. Clearly, the process of expanding or contracting the mantissa will render the first bit of our four byte group set (=1). Remembering that we are only simulating what the interpreter is doing when it reads a real number, the machine therefore knows that this is a set bit, so it is convenient to use it as a sign bit. Therefore, it is left set for negative numbers and reset (=0) for positive numbers.

In our simulation, resetting the first bit is equivalent to subtracting 128 (or 2↑7) from A. Thus, A will be less than 128 for positive numbers and greater than or equal to 128 for negative numbers. For quite different reasons the exponent is adjusted in order to balance accuracy equally between very large and very small numbers. As the exponent is an integer, as also is the mantissa now, which can range from D-255, this balance is best achieved by making the exponent of the absolute value of 0.5 (enter as ½ when running the program) equal to 128.

Thus,
IF ABS (x) > 1/2 THEN exp > 128 and
IF ABS (x) < 1/2 THEN exp < 128
You will find that the convention gives:

x = 1/2: Exponent = 128
Mantissa = 0 0 0 0
x = -1/2: Exponent = 128
Mantissa = 128 0 0 0

To set the first bit of a four byte group from x = 1/2 requires n to be incremented to 32. Hence the reason why n is subtracted from 160 to give an exponent of 128 at the "balance point". This "bias" becomes part of the convention (like the sign bit) and can now be used throughout.

Peek variables area

Program 2 is intended mainly for Spectrum users to demonstrate the fact that integers and real numbers are held differently. The line numbers are such that Program 2 can be run in conjunction with Program 1 to validate floating point representations, so ZX-81 users will also find it helpful in this respect.

The program shows how a number is actually stored in the VARS (variables) area of RAM. It gives the five byte representation of any number N, however it is entered and (for Spectrum) flags integer or floating point by looking at the first byte (zero for integers). To be sure that N is the first variable in VARS, you should RUN (rather than GOTO 10) to execute, in order to clear the variables area.

A few modifications are necessary to run Program 2 on the ZX-81:

1) Line 40: Change the systems variable pointing to VARS to 16400 and 16401.

2) For 1K machines change PRINT to LPRINT in line 90. This is to prevent screen printing from expanding the display file, thereby shifting VARS further down in memory.

To illustrate how the two machines differ in application, inputting N = 1200 gives:
Spectrum:
5 byte integer: 0,0,176,4,0
ZX-81:
5 byte floating point:
139 (exponent)
22,0,0,0 (mantissa)
Spectrum owners can also obtain the floating point representation by entering, for example,
N = 1200.00000001

Number manipulation

So far, we have only considered how numbers are represented inside the computer. Numbers also have to be arithmetically manipulated using all the various operators at the programmer's disposal.

Without going into detail, it will be clear that integer arithmetic is much more straightforward than floating point. Quite apart from the problem of conversion; adding, subtracting, and multiplying numbers with different exponents presents even bigger problems for the designer of micro hardware/systems software. The solution is much more difficult for an 8 bit micro than 32 bit main-frames, minis and the QL.

Although the speed advantage of integer arithmetic is to be found in some micros this feature is sadly lacking for both Spectrum and ZX-81.

You should by now have a good idea of how numbers are stored in the VARS area of RAM. You also need to know that the memory area allocated to your BASIC program also stores any numbers which are assigned literally within the program. Such numbers are called LITERALS. These may come in many forms e.g. LET a=5, DATA 201, 193;

```
 10 REM  PEEK INTO PROGRAM
 20 LET Z=10
 30 GO TO 40
 40 DATA 3,5
 50 PRINT "LOC"; TAB 10;"CODE"

 55 LET V= PEEK 23635+256* PEEK
23636
 60 FOR X=V TO V+100
 70 PRINT X; TAB 10; PEEK X
 80 NEXT X
```

IF X>3; FOR Z = 1 TO 10; LET r=r+1 etc. All the numbers in these statements are literals.

Every time a literal is read by the BASIC interpreter, it is immediately converted to the floating point or integer (Spectrum) representation. More precisely, this is done as soon as a statement containing literals is entered. The format used is the same 5 byte pattern we have already seen for storing numbers in the variables area.

Peek program area

Program 3 will help you to understand more about literals by PEEKING the memory assigned to it. It can be used for both machines, although ZX-81 users should type line 55 as:

55 LET V = PEEK 16509 +
256 * PEEK 16510

This reflects the different start points used for storing BASIC programs.

The program looks at the first 100 bytes of the PROGram area. Lines 20, 30 and 40 do little except demonstrate literals. Such lines are called "dummies". The demonstration works as follows:

1) RUN program, and scroll output up to CODE = 13. This denotes ENTER and marks the end of the first REM line. (CODE=118=NEWLINE for ZX-81).

2) The next four locations contain line number and length for line 20.

3) Five bytes are then seen to represent the five keystrokes of LET Z = 10

4) You will now see CODE=14 (1 for ZX-81) which is the number flag.

5) The next five bytes contain the number 10 in integer format (floating point for ZX-81).

6) If you scroll on, you can work out for yourself how the pattern repeated for other literals (three more).

Far beyond Mirkwood lies a magical, uncharted land

We look at some recent adventure releases and find within them vast, complex worlds which, a year ago, would have been impossible.

EXCELLENT though many of last year's other adventure programs were, it was **The Hobbit** which convinced most people that it was possible to fit an entire new world inside a Spectrum. Anybody who was anybody had to find out how to escape from the goblin's dungeon, and the game sold and sold.

The lure of an alternative world has proved lastingly attractive. The real attraction of fitting such a place into a computer is that, unlike a book or a film, it is possible for the user to become involved, and to change the course of events.

Lords of Midnight from Beyond is the best development so far of the other worlds theme. It includes 4000 locations, and the view in each of eight directions from all these locations can be displayed on screen. Forests, ruins, lakes and mountains can all be seen from each different angle. The effect is similar to that of **The Forest** by Phipps Associates, although it is here used in a completely different context.

Luxor and Doomdark

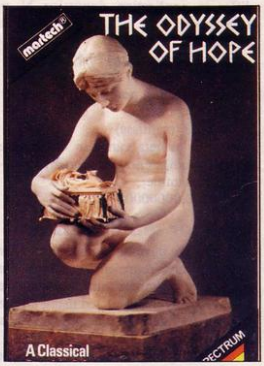
The story behind the game is so complex that it cannot be explained in the usual form of cassette insert but, instead, takes up several chapters of fantasy novel, which are included with the program.

The story is, in brief, that Lord Doomdark has taken over the Kingdom of the Moon, and infected its inhabitants with the Ice Fear. His forces, the Foul, are the villains. Against him fight the rightful heir to the kingdom, Luxor the Moonprince and his son Morkin, together with Corleth the Fey and Rorthron the Wise. Luxor possesses the moonring, which allows him to see through the eyes of any major character on his side, a neat structural device which explains convincingly why you should be able to move from one character to the next.

The aim of the game is two-fold. Firstly, you can concentrate on the character of Morkin. His quest is to find and destroy the Ice Crown, source of Doomdark's power. This is by no means an easy task, for Morkin must steal through Doomdark's armies, find food and shelter on the way, kill wild beasts and finally make his way to Doomdark's fortress and steal the Ice Crown. His problems then continue for he must then find one of the few characters able to destroy the Ice Crown.

To complete the entire game it is necessary not only to move Morkin, but also the other three characters. Their aim is to hold off the forces of Doomdark, and finally to drive them out of the country. The Foul move down from the north, so sympathisers must be recruited, armies mustered and troops taken to battle as quickly as possible.

The game is enormously complicated and reading the book, understanding the point of the game and learning to relate the position of characters on screen to the map can take one entire playing session. People who like to load a game and start playing immediately will find this off-putting but, once the game has been understood, it is relatively easy to play, although coming anywhere near to finishing it is extremely difficult.



What the game really lacks is a detailed map, of the sort available with The Forest. Mapping 4000 locations by hand is extremely difficult, and a professional battle map would make all the difference in keeping close track of what is happening in battle.

After the Lords of Midnight, the other adventure games on the market, good though they are, pale in comparison.

The Odyssey of Hope is set in classical Greece. The theme of the adventure is that Hope has been stolen from Pandora's Box. Those who remember classical myths and legends will find that they have a headstart on clues on this program. How can you escape from the labyrinth, what is a naiad, and what are the great clashing rocks at sea? All these questions will stump players who have neglected their Homer.

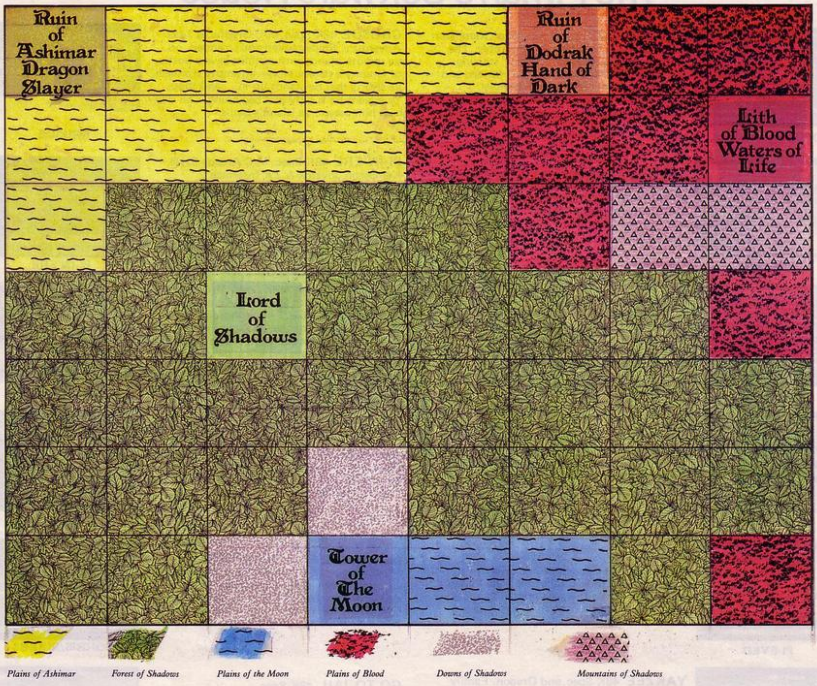
Eat the fish

The adventure itself is very difficult. Many directions lead to instant death at sea, and it takes many false starts and careful mapping before you can be sure enough of your ground to begin solving any problems.

Problem number one is that, right next to the start location, you walk into a building from which escape seems impossible. A careful search reveals fish, wine, plough, loom and wheel, none of which seem designed for escape. The window pictured does not appear to exist in the computer's memory, and few ardent adventurers are likely to be able to fathom that it is necessary to eat the fish, and then use its backbone as a saw.

Obscure stuff. Even more esoteric is the new adventure, **Crusoe** from Automata. Both **Pimania** and **Uncle Groucho** from Automata were enjoyable games, and so is Crusoe. If other adventure games can be described as being like a normal crossword, Automata's adventures can be described as acrostics. Completely obscure at first, they have their own cult following.

Crusoe is an illustrated adventure, showing a segment of island, complete with trees, seas, monsters, mysterious objects and much more. The Pi-man, star of so many other adventures, is set to save Crusoe: a very difficult task. It is easy to become so engrossed in watching the miniscule Pi-man, move around the eye-strainingly detailed map, that you forget this is an adventure, and that the Pi-man must do many things other than simply move.



There are 4,000 different locations in the Lords of Midnight. This section of the terrain north of the Tower of the Moon shows how complex the countryside is.

It is essential that the Pi-man maintains his energy, by eating and drinking regularly. Drinking at pools is easy enough, but obtaining food from the fruit trees is more difficult. If the Pi-man does not eat he feels ill very soon, and will not last a day. His physical condition is charted on the right of the screen, in mock Middle-English script. Other dangers involve being eaten by crocodiles, sea-monsters or common-or-garden land monsters.

You either like Automata games or you hate them. Either way, they are so off-beat that they are worth trying once. Crusoe is difficult, it will take a lot of thought and, with those graphics, it will certainly strain your eyes.

Temple of Vran, from Incentive Software is the second adventure in their Mountains of Ket trilogy. The story carries on from the first part, **Mountains of Ket,** although it is not necessary to have played the first adventure in order to enjoy the second.

Use the trampoline

Your mission in Temple of Vran is to reach the temple in the east and, once there, to put an end to its evil inhabitants. On the way you will find some strange objects to help you in your quest. A sleeping kitten, a mouse, an elephant and a small trampoline all make up part of the mystery. Also useful are objects which you already hold when the game begins. Check these before you move anywhere, or you may meet an unexpected and needless death.

A feature of these games is their fight sequences, in which your prowess, energy and luck are displayed on screen, together with those of your opponent. In many cases, it is obvious from the outset which character will win and, each time you are hit, you are given the chance to escape. The Warts, who appear frequently in this game and are given to throwing acid or attacking you for no reason, give plenty of opportunity for testing fighting skill. It is necessary to be careful, though, before indulging in needless slaughter for many of the characters who can be killed are useful.

Intriguing game

Temple of Vran is an intriguing game with a lot of possibilities. The puzzles are simple to begin with, and then become more and more difficult. Knowing when to fight people, and when to talk to them is also a continual problem, and the lack of a HELP facility makes the problems appear even more difficult.

AUTOMATA U.K.

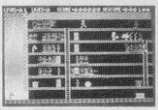
The Piman's Software House

DEUS EX MACHINA

DEUS EX MACHINA 48K Spec. Kempston Joystick & ZX Interface 2 compatible. The unique new era of entertainment, starring Ian Dury, Jon Pertwee, Frankie Howerd and you, in an animated televised fantasy, synchronised to an incredible stereo sound-track. There is nothing like it in this world.

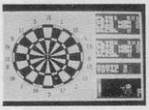
PIMANIA

PIMANIA 48K Spec. The Cult Adventure that's for real! Could you be the lucky winner of 'The Golden Sundial of Pi'? Many have tried and failed. Voted program of 1983 by the Computer Trade Association (Joint winner).



PIROMANIA

PIROMANIA 48K Spec. M/C Arcade Style, Kempston Joystick & ZX Interface 2 compatible. Strike a light! Fire your imagination. That bright spark of a Piman is flaming well out to make the residents of Automata Towers the toast of the town! Can you help Walter Hose dampen the Piman's extinguished career and help the inmates give up smoking?

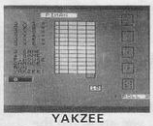


DARTZ

DARTZ 48K Spec. Family fun. This 'arrowing version of your local's favourite game! Includes true life scoring with 'The more you play the more you drink, the worse your game becomes' rule!

PI-EYED

PI-EYED 48K Spec. M/C Arcade Style. Kempston Joystick compatible. The Piman's hit the bottle! Can you help him negotiate the traffic and drink the town dry?



YAKZEE

YAKZEE 48K Spec. and Dragon. Family fun. An oriental game of luck and skill for 1 to 4 players, playing between 1 to 4 rounds. Each tape comes with both the Dragon and the 48K Spectrum versions along with a simple to follow guide on how to play YAKZEE.

NEW WHEELS JOHN? 48K Spec. Family fun. Would you buy a used motor from this man? Dare you clock an old banger? Have you ever wondered what it's like to run your own second-hand car lot? Wheel leave the rust to you!

CRUSOE

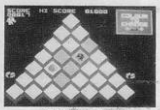
CRUSOE 48K Spec. M/C Graphic & Text Adventure. Shipwrecked and stranded, on ye remote island, with nothing save a bottle of Granny's patent elixyr, an empty stomach, ye shorts that he stands up in . . and thou. Ye adventure is only just beginning. Can you help him escape ye island's perils?

PI-IN'ERE

PI-IN'ERE 48K Spec. M/C Arcade Style. Kempston Joystck & ZX Interface 2 compatible. 61 screens of action as Burt searches for the elusive bug inside a computer, while keeping out of the reaches of the minor menaces. The program includes Hi-Score, Save and Load facility as well as Replay from last position feature.

OLYMPIMANIA

OLYMPIMANIA 48K Spec. M/C Arcade Style. Currah Micro Speech & Kempston Joystick compatible. For all those who just can't get enough of the Olympics, the Piman stages his own just for you! Yes he's going for gold in the craziest events you've ever seen! Can you set new world records in the Speepichase, Alpi Ski-ing, Pitathlon, Pi-Jump, or even the Butterpi? The Piland International Anthem on the flip side.

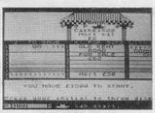


PI-BALLED

PI-BALLED 48K Spec. M/C Arcade Style. Currah Microspeech & Kempston Joystick compatible. Bouncy, bouncy, this fast action game will let you have a ball! Starring The Balls Brothers, Sid the Snake, Jas'n'Col, and your friend and ours The Piman.

MORRIS/BIKERS

MORRIS MEETS THE BIKERS
16/48K Spec. M/C Arcade Style. Kempston Joystick compatible. Morris finds himself abandoned in a multi-storey car park. Help him gather the 10 coins per screen to pay his way out, while avoiding the kamikaze bikers.



GO TO JAIL

GO TO JAIL 48K Spec.
Family fun. A computer property trading game for up to 5 players. Your computer not only acts as a banker, but can also take on the roll of a ruthless player, buying, selling and trading its own property.

BACKCHAT CBM64 Speech Synthesiser. Automata's speech synthesiser comes complete with easy to use Programming Manual and Software cassette containing both BASIC & M/Code programs, so you can now add speech to all your home grown games using BACKCHAT's allophone vocabulary.

SLITHERY Jim is a program suitable for young children. Tempt Jim out of the basket by offering him different animals to eat. There are thirty animals recognised by Jim and these include cats, dogs, bears and sloths. If any of these are mispelt or an unknown animal is entered, a question mark is shown. The other answers depend on how Jim is feeling. If he is happy he will want the animal but if you upset him he may want to eat you.

Slithery Jim was written for the 16K ZX-81 by Ron Wood of Christchurch, Gloucestershire.

mr SOCKET

BRICKS and light bulbs fall from the top of the screen and you must catch as many as you can. If any of the objects touch the floor an uncrossable crater will be left. It is possible, however, to use any bricks you have caught to fill the holes. If a brick hits you anywhere other than on your hat you will die.

Mr Socket was written for the 16K Spectrum by John Hobdell, aged 14, of Dursley, Glos.

Ravenous Reptile

MUSHROOMS worth varying points appear at intervals on the screen. You, the reptile, must try to eat them before they turn poisonous. Each mushroom will turn poisonous if it is not eaten before its value reaches 0. If you manage to eat a mushroom your score will increase and extra sections will be added to your body according to the number of points left in the mushroom.

Ravenous Reptile was written for the 16K ZX-81 by Gerard Pegram of Braintree, Essex.

DRESS DESIGNER

HOLD off spies, cheat guards and design breathtaking clothes in **Dress Designer,** written for the 16K ZX-81 by Grant and Claïre Ritchie of Dalkeith, Midlothian.

Your location is unknown so you must explore. You are able to swap fashions, enter a room, sew dresses if you find a sewing machine or steal designs if you discover an easel. If a guard leaves the room to admire himself you can sneak in and find a fashion. Your needle power, number of designs and fashions collected and also the number of spies killed are shown at the end of the game, together with your score.

SPIDER SENTRIES

EXPLORE the treasure vaults in the lost city in search of gold. The vaults are patrolled by **Spider sentries** who attack any intruders. To open the treasure chests you must touch the tops of them whilst taking care to avoid the spiders. If you wish to move on to the next vault, stand four steps away from the wall and shoot a hole through it.

Written for the 16K Spectrum by Andrew Sherwood of West Bromwich, West Midlands.

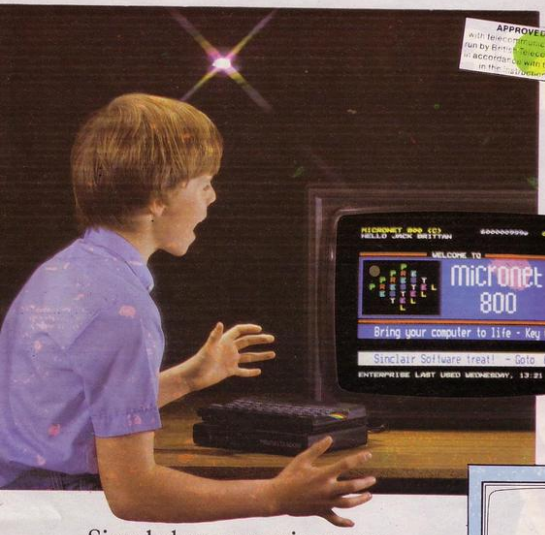
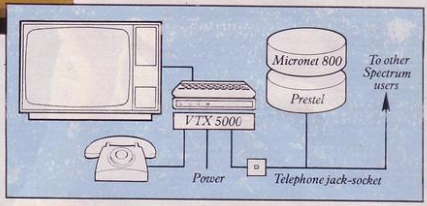
Sneak into a mainframe with your Spectrum...

...and access an
of news, view



Games

Travel



Simply by connecting your Spectrum to the telephone line, via the award-winning Prism VTX 5000 communications modem, you can get to all the information, games and communication facilities held on viewdata mainframes.

So, you can link into a variety of services, including Prestel and Micronet 800. Access hundreds of software programs – many completely free. Talk to fellow users. Keep up-to-date with all the latest national, international and micro news. Play on-screen games. Check sports results. Book travel and entertainment. Learn a language.

The choice is simply vast.

Plus, your Prism VTX 5000 allows you to communicate directly with other Spectrum owners.

And now, our special offer means that you can do all this for just £11* a month. So complete the coupon and send it to us today, and we will let you have full details of our unbeatable offer.

* All prices quoted refer to domestic use only. For business use the Prestel annual standing charge is £66. Therefore business users will be billed £44.50 per quarter.

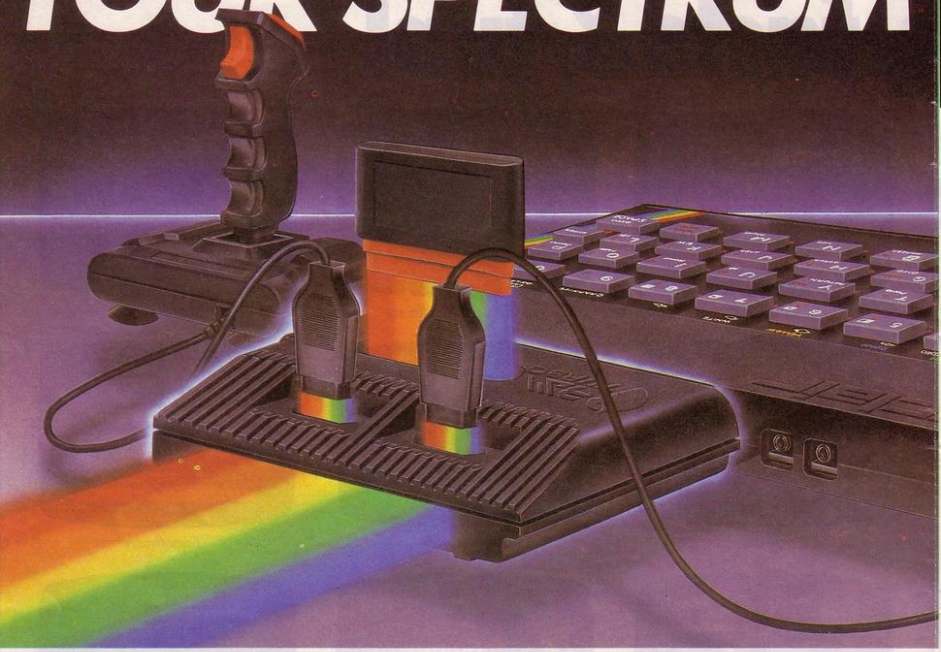
TURBO CHARGE YOUR SPECTRUM



Outperforms any Spectrum interface

The unique Turbo interface from Ram gives you all these features – and more – in one unit:

- A variety of interfaces including: Rom cartridges, two 9-way D plugs for standard joysticks, PLUS full expansion bus at rear.
- Compatible with Kempston and Protek protocols.
- Works with latest Quickshot Mk II auto rapid-fire joysticks!
- Choice of Rom cartridge or tape cassette software.
- Instant program loading with cartridge software.
- Built-in power safety device – unique to Ram Turbo.
- Full one year guarantee.
- Immediate availability – 24 Hr despatch on receipt of P.O./ credit card details (cheques – seven days).
- Incredible value – only £22.95.

So don't wait around – simply complete the coupon and send it to us today.

Or call our credit card hot line on 02514 25252. (Access and Visa welcome).

Ram Electronics (Fleet) Ltd, 106 Fleet Road, Fleet, Hampshire GU13 8PA.

24 Hr despatch for credit cards and postal orders

Please send me:

_____ Spectrum Turbo Interface(s) at £22.95 + £1 p+p (overseas orders £3 p+p)

_____ Quickshot II Joystick(s) at £9.95 (Only when purchased with Turbo – normally £12.95 + £1 p+p)

I enclose cheque/postal order or charge my Access/Visa for: £_____

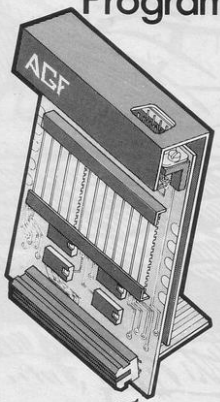
Programmable Interface



The AGF Programmable Joystick Interface has established itself over the past year as being the only hardware programmed device that accepts ALL standard joysticks or trackballs — including Quickshot II with 'rapid-fire' — for use with ALL Spectrum or ZX81 software.

The hardware programming method employed by this product has several advantages over similar interfaces that require extra tapes to be loaded or combinations of key presses and movements of the joystick to be made before each game, i.e

- Programming is *not* lost when power is disconnected between games.
- Eight directional control only requires setting of the four normal directions.
- Compatibility guaranteed with ALL key reading methods — machine code and BASIC.
- Several interfaces can be separately programmed for multi-player software.
- Low power four i.c. design allows more expansion.

The programming leads attached to the interface make contact with miniature crocodile clips that give oxidisation free connections every time, unlike plug and socket arrangements, and they don't work loose in constant use.

Keyboard operation is unaffected by this interface and it is guaranteed never to conflict with ANY other add-ons.

12 month guarantee, key programming chart and a pack of ten Quick Reference Programming cards with full instructions are supplied.

21.95
~~26.95~~ ~~plus £1 post & packing~~

Interface II

Only **9.95**

Now the AGF Interface II is even better value. Since we pioneered the cursor-key interface in October 1982 there are now over 100 games or utility programs with either the AGF option or cursor key controlled — that makes it unbeatable at this new low price.

Still incorporating the all important rear expansion connector which means other peripherals can be connected at the same time i.e Rain Packs, Printers, Speech Units etc, and of course the key replication principle used guarantees this will never conflict electrically with any other add-ons.

NEW

RomSlot

The new AGF RomSlot has been designed for anyone who already owns a programmable joystick interface, or prefers to use the keyboard to control games, and would like to add the facility of ROM cartridge software to their system.

ROM games are already available from Sinclair and in August five totally new titles are to be released by Parker Video Games — exclusively in ROM format.

The advantages of this new system are instantly loading games that may have required a larger memory capacity if loaded by cassette. The ROM cartridge is actually a dedicated memory device with the program permanently stored in; ready for immediate use.

An extra feature of the AGF RomSlot is the 'Restart' facility. Any program can be instantly re-started or conventional machine code games cleared without the need to remove the power.

RomSlot is cased with a full expansion connector for other add-ons and is covered by a 12 month guarantee.

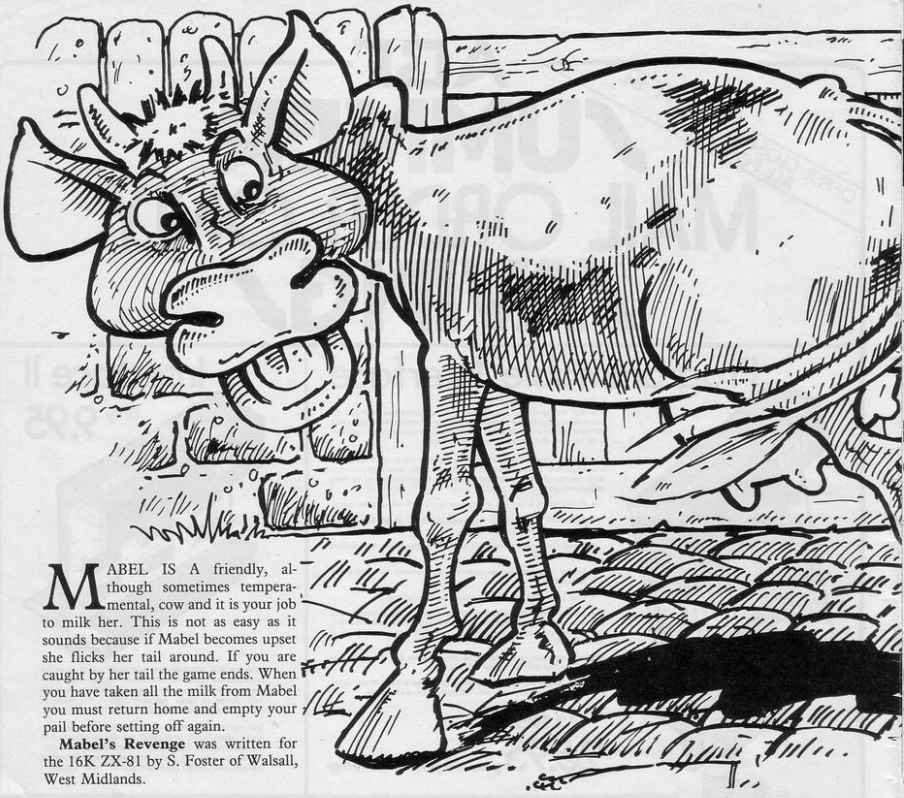
DEALER ENQUIRIES WELCOME



MABEL IS A friendly, although sometimes temperamental, cow and it is your job to milk her. This is not as easy as it sounds because if Mabel becomes upset she flicks her tail around. If you are caught by her tail the game ends. When you have taken all the milk from Mabel you must return home and empty your pail before setting off again.

Mabel's Revenge was written for the 16K ZX-81 by S. Foster of Walsall, West Midlands.

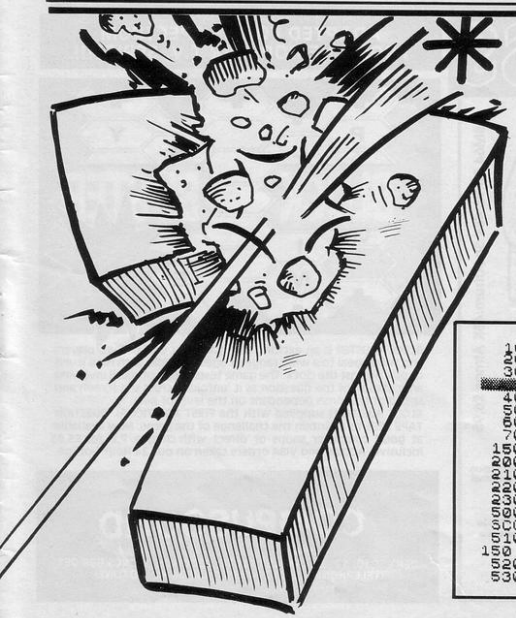
SIDE SHOW

BIRDS pass in front of you on a side stall at a fairground. You are given twenty stones by the fairground worker and have to throw the stones at the birds. Points will be awarded according to the number of birds hit.

Side Show was written for the 16K Spectrum by Graham Creasey of Ashford, Kent.



NUMBER BLAST

A RANDOM asterisk will move from the left of the screen to the number opposite it on the right. The asterisk takes about a second to reach the number and you must have your finger pressed on the corresponding number on the keyboard before it does so. The game begins again if the asterisk arrives first, and one point can be gained for each number pressed.

Number Blast was written for the 1K ZX-81 by A West of Dolphinholme, Lancaster.

RUN INTO the flashing diamonds on each level and the **Scaffolding** will appear. Climb the scaffolding to the next level and continue this procedure to the top of the screen where you will be able to rescue your maiden before the ghost reaches her. If the scaffolding does not appear it may be underneath the diamond. Use keys O, P and Z to play.

Written for the 16K Spectrum by Paul Gibson, of Nuneaton, Warks.

GOVERNMENT GENERATOR

THE GOVERNMENT are building a high voltage power generator to prevent you, the fearsome enemy, from landing your Martian craft. The parts for the generator are carried over the bridge on tanks. To prevent the tanks reaching their destination you have to bomb them through the gaps in the force field. When the tanks have placed all the parts under the arches in the bridge you must bomb the vehicle holding the power supply or you will be doomed.

Government Generator was written for the 16K ZX-81 by John Wood of Wednesbury, West Midlands.

BIRD WATCHER

REPORTS have been circulating of sightings of the rare Dumb-Dumb bird in north-east Scotland. As a keen bird watcher and expert photographer you have been summoned to take the official pictures. To take a photograph press the key corresponding to the nest in which the bird appears. If you are too slow you will be sacked.

Bird Watcher was written for the 16K Spectrum by Graham Creasey of Ashford, Kent.

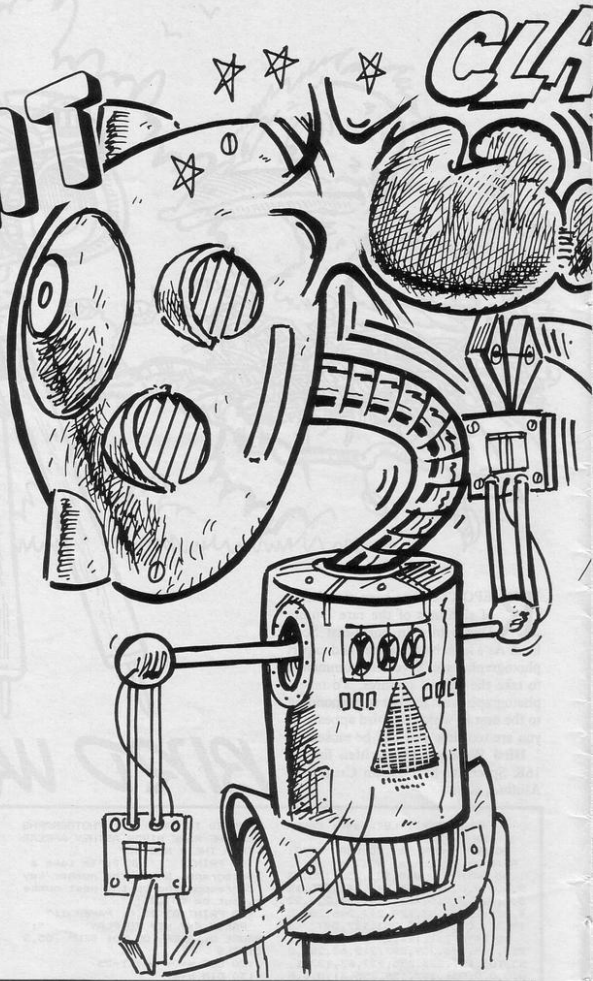
THE FIGHT



A ROBOT ring master referees the fight between you and the computer. You are able to block punches thrown by your opponent and you can also retreat, kick, punch and attack. The keys to use, together with a scoreboard and rows of spectators, are shown on screen.

The Fight was written for the 16K Spectrum by M J Bradford of Heywood, Lancs.

HEAD FOR THE STARS

WAIT until a star is above your head and then jump at it. If you hit the beam instead of the star you will lose the game. See how many stars you can hit before you knock your head on the beam.

Head for the Stars was written for the 16K Spectrum by Emlyn Howell, aged 9, of Brighton, Sussex.

THIS MONTH IN Sinclair Programs

● COMPETITION

● ***Sinclair Research*** **are providing a great first prize for our easy-to-enter competition. Will it be a Microdrive, an Interface Two or a QL computer? Read *Sinclair Programs* to find out. Second prize will be a light pen and new keyboard, third prize will be a joystick and Spectrum interface. A hundred runners-up will win software from any one of ten top companies.**

● ***PLUS*** Thirty new program listings for the Spectrum and ZX-81, including a full-scale professional program for the ZX-81.
● ***PLUS*** Hard-hitting reviews of all the latest programs.
● ***PLUS*** A fresh look at some of the adventure games on the market: a section designed especially for beginners: and the next part of our programming course.

CURRAH μSPEECH

Speech Synthesiser for ZX Spectrum

The **CURRAH μSPEECH** is ready to talk immediately on power-up, has an infinite vocabulary and outputs speech and ZX Spectrum sound through your TV speaker. There is no software to load with **μSPEECH** — sophisticated Gate Array technology means you can just plug in and start constructing words and sentences like this:
LET S$ = "sp(ee)k (nn)(oo) (ee)vl" will say "speak no evil"! Further commands control the "voicing" of keys as they are pressed, and an intonation facility allows you to add expression to the speech.

μSPEECH is fully compatible with ZX Interface 1 and may be used with the **CURRAH μSLOT** Expandable Motherboard, allowing easy expansion of your ZX system. **μSPEECH** and **μSLOT** will also be compatible with the **CURRAH μSOURCE** unit when it arrives later this year, allowing you to write **Assembler** and **FORTH** statements directly into your **BASIC** programs!

Top selling games like ULTIMATE'S Lunar Jetman feature **μSPEECH** voice output — watch out for other titles from Bug-Byte, CDS, Ocean, Quicksilva and PSS.

μSPEECH is available from COMET, W.H. SMITH, WOOLWORTHS, GREENS, BOOTS, JOHN MENZIES, SPECTRUM STORES and good dealers nationwide — or use the form to order the **CURRAH μSPEECH** — winner of the CTA 'Product of the Year' award 1984.
